## QUIZ - MATH GRADE 10

1. (10\%) A line with $\mathrm{m}=$ $\qquad$ is more steep than a line with $\mathrm{m}=1.1$ and less steep than $\mathrm{m}=1.2$
2. ( $15 \%$ ) Given the graph, write the expression of the function:

3. $(40 \%)$ The number of cars in a parking lot with a 1500 spots can be approximated by a linear function. The parking opens at 6 am (it is empty during the night) and cars flow in until it is full at 10am.
a. (15\%) Find a linear function to describe the number of cars in the parking as a function of the time $t$ ( $t$ should be in the interval $[6,10])$. Indicate its domain and range.
b. (5\%) Use your model to predict the number of cars at 8:30
c. $(10 \%)$ What time should the parking close in case 200 free spots are needed for maintenance purposes?
d. (10\%) Sketch the function, indicate all info on graph:

4. $(35 \%) 2$ Students are trying to memorize a list of 50 words. Student 1 is using the method "supermemory" that allows to memorize 10 words in the first minute and 4 words with every minute that passes, while Student 2 is using the method "impossibletoforget" that allows to memorize 16 words in the first minute and 2 words with every minute that passes.
a. (10\%) Find a linear function to describe the number of words memorized using each one of the methods. Indicate its domain and range.
b. $(10 \%)$ Sketch the functions, find and indicate all the important points on graph:
c. (15\%) Discuss which model is better in which case.
