## QUIZ 27 - MATH IB HL

1. (6 marks) Given a triangle ABC in which $\mathrm{AB}=8 \mathrm{~cm}, \mathrm{BC}=10 \mathrm{~cm}$ and the angle ABC is obtuse. It is known that the area of the triangle is $19 \mathrm{~cm}^{2}$. Find the angle ABC .
2. (6 marks ) If A is an obtuse angle in a triangle and $\cos \mathrm{A}=-\frac{1}{3}$, calculate the exact value of $\tan 2 \mathrm{~A}$. No calculator in this question, work must be shown.
3. ( 6 marks) Given that the radius of the circle is $2 \mathrm{~cm}, \mathrm{~B}$ is the centre of the circle, AC is tangent to the circle at C and that the angle $\mathrm{CBD}=1 \mathrm{rad}$. Find the area shaded. Give your answer as an expression.

4. (12 marks) Given the points $\mathrm{A}(2,1), \mathrm{B}(-3,0), \mathrm{C}(1, \mathrm{k})$
a. (1 mark) Sketch the points on the diagram and draw the triangle formed in case $\mathrm{k}=3$
b. (3 marks) Find the perimeter of the triangle in case $\mathrm{k}=3$

c. (4 marks) In case $\mathrm{k}=3$, using the appropriate rule show that $\operatorname{Cos}(A B C)=\frac{23}{5 \sqrt{26}}$
d. (4 marks) Given that the angle ABC is $30^{\circ}$, and that the area of the triangle is, $\sqrt{130}$, find k .
